

EMCO+ Needle Valves type 1604

Principle

Emco+ needle valves type 1604 are used as primary shut-off valves in connection with primary elements (orifice plates, venturis etc.)

Construction

The valve body is drop forged in one piece.
The valves are supplied with weld ends for butt-welding or socket-welding.
The stuffing box is external to valve spindle thread.
The seat is exchangeable.

The valves are pressure tested to 600 bar.

Technical Data

Material	: 13CrMo44
Packing	: Graphite.
Hand wheel	: Pressed steel.
Connection	: weld ends
Sizes	: Ø 21,3 (1/2")
Pressure rating	: PN 400
Temperature	: max. 400 °C
